About the Clinic:

At the UVA Pediatric Diagnostic Clinic our goal is to assess patients with challenging or unusual symptoms of uncertain cause, with the goal of improving patients’ overall health and well-being. We will work to develop a comprehensive diagnostic and treatment plan based on a complete review of medical records, an in-person assessment, and laboratory evaluation or referral to specialists as indicated. Examples include children with unexpected pain, chronic fatigue, or sudden onset tic syndromes (PANDAS).

After the visit, we will provide an in-depth report to both the parents and the primary care physician with recommendations for on-going care. It is our expectation that children will return to care with their primary care physicians, although they can be seen in the Diagnostic Clinic for follow-up as needed.

Meet Our Doctor:

Dr. Sarah Boggs is a general pediatrician and pediatric infectious diseases specialist who has been at UVA since 2012. In addition to her practice with UVA’s Pediatrics at Orange clinic in rural Virginia, she is also the director of the UVA International Adoption Clinic. Her fellowship research was in characterizing the epidemiology of *S. aureus* in the NICU as well as in antibiotic stewardship, and her time working in infectious diseases taught her how to critically analyze complex patients.

The Clinic is referral based only. To refer patients to the clinic, please contact Sharon Holland by Phone (434)-924-9141 or Fax (434)-982-4246, and indicate “Diagnostic Clinic” on your referral. Prior to the clinic visit, please provide all relevant medical records, labs and studies to be reviewed before your appointment.
