# KEATS SOCIETY

SUMMER 2022

## YOUR LEGACY *by Alan Matsumoto, MD, Chair*

The recent Keats Society Homecoming reunion weekend brought a diverse group of alumni together from several different generations and geographies. In

doing so, I couldn't help but reflect on this quote from Winston Churchill: "We make a living by what we get, but make a life by what we give."

Not only did Ted Keats influence the world of Radiology through the impact of his work, but by endowing a lectureship and our alumni society he also helped to establish his legacy at the University of Virginia by creating a spirit of learning, community and camaraderie among past and future alumni.

After the isolation many of us have experienced over the past two years, the 2022 Keats Homecoming gave many of us an opportunity to gather with colleagues and friends for a sunset at the home of Patt Keats, to spend time in the sunshine and fresh air by either hitting a few golf balls (sometimes into the woods) or hiking along the Rivanna River, as well as a good old-fashioned picnic at Pen Park. On Saturday night we

enjoyed beautiful views from the rooftop of The Quirk Hotel and, with a few beverages in hand, we broke bread together and listened to the beat of the Cat's Curfew band, with the lead vocalist and guitarist being our own Dr. Drew Lambert and Sam Beishline (Body Imaging PA), respectively.

If one of our purposes in life is to be of service to others by giving, then Theodore E. Keats led a very purposeful life. The gift of his legacy reminds us to make the time to come together to learn, laugh and share stories and memories with one another under the umbrella of the UVA community that we all cherish and value.

Please remember that all of us can and should take advantage of any opportunity we have to fulfill our highest duty in life—to give and to pay it forward. We do well to remember that doing so will bring us a sense of greater fulfillment and help to define our own legacy.

Take care and be kind, always.

## A WELCOME FROM THE NEW PRESIDENT

Hello! I am thrilled to introduce myself as the new Keats Society President. As a native of Charlottesville and a triple 'Hoo, I couldn't be more excited to lead such a valuable and rewarding organization. In the short time I've been in this role, I have come to realize what a tremendous amount of work and dedication was put in by my predecessor, Dr. Carrie Rochman. So as my first official act as president, I would like to offer a much-deserved thanks to Carrie for the years of dedication and service she gave the society. Thank you, Carrie!

This spring we saw a welcome return to the familiar traditions of the Keats Society. The delightful Homecoming Weekend on April 29-30 gave alumni from all over the country a chance to reconnect and enjoy the heartening benefits of an in-person event. It also offered our trainees the opportunity to see the virtues of such a strong alumni society. While Dr. McGinty's informative and thought-provoking

lectures, "Imaging Economics 101" and "Why Health Equity is in Radiology's Lane" were given virtually due to COVID-19, the impact on attendees was in no way diminished. Finally, the banquet on Saturday night was capped off by a rousing musical performance by past Keats Society President Dr. Drew Lambert and his band!

In June we were lucky enough to celebrate the graduating residency class of 2022 with the first full, in-person graduation ceremony the department has hosted in three years. The graduating residents, together with their family and friends, were welcomed into the Keats Society as the newest alumni members during the celebration at Glenmore Country Club.

With the memory of our most recent Homecoming fresh in our minds, it's hard to believe that planning has already begun for the next one. We hope to see all of you in-person in the spring of 2024!

A.J. Pesch, MD  
Keats Society President

## REMEMBERING HANS

We are saddened to share the news that Dr. Hans Olav Riddervold passed away on July 14, 2022 in Norway, seven months shy of his 100th birthday. He was surrounded by his beloved family, including his dear wife, Anna Greta.

Dr. Riddervold was a faculty member in the UVA Department of Radiology and Medical Imaging for 50 years, retiring in 2008. He is familiar to many Keats Society members for the Riddervold Open Golf Tournament, which is part of each UVA Radiology Alumni Homecoming Reunion weekend and was named in his honor. He helped organize the tournament and provided awards, including some wine made from grapes from his vineyard, and maintained an active role even after his return to Norway in 2018. In fact, he was still supervising the April 2022 tournament and even selected prizes for the winners!

Dr. Riddervold's association with the Keats Society goes beyond the tournament named in his honor. In 1979, along with Dr. Daniel Seale, he founded the original iteration of the Keats Society. It was called the Keats Radiologic Society, named in Dr. Keats' honor. In April

of that year, he presided over its first-ever meeting, and remained in an active leadership role until the original iteration of the Society became inactive in 1994. In 2005, the Society was resurrected and Dr. Riddervold couldn't have been happier. He was always involved and wanted to help grow the Society and keep Dr. Keats' legacy alive.

Dr. Riddervold was beloved by his students, colleagues, staff and friends. As a radiologist and teacher, he had high expectations and standards, but through his gentle manner and soul, he was able to share with us many lessons about life, humility, and compassion. The impact of his kind spirit and thoughtful life lessons that touched those of us who knew him represent his legacy.

In lieu of flowers, Dr. Riddervold's family has asked that donations be made in his memory to the Norwegian Refugee Council. For Keats Society members in the United States, gifts can be made at the following link: [med.virginia.edu/radiology/2022/07/26/riddervold](https://med.virginia.edu/radiology/2022/07/26/riddervold)

On behalf of the Keats Society,  
Karen Barden and Alan Matsumoto

## ALUMNI & FRIENDS EVENT

TUESDAY, NOVEMBER 29  
6:00-8:00PM

THE ROOF AT THE WIT  
201 NORTH STATE STREET  
CHICAGO, IL 60601  
27TH FLOOR

# REFLECTIONS

## FROM OUR RESIDENCY CLASS OF 2022

### Ramona Chaudhry, MD

I have really enjoyed my time during my residency at UVA. I've grown so much as a physician and have developed a great foundation of knowledge as a radiologist. I'm grateful to all the attendings for their guidance along the way and to my colleagues for their friendship. I've made some amazing friends and accomplished so much in the last four years! I can't wait for what the future holds.

Plans for Next Year: I will be continuing at UVA with a breast imaging fellowship.

### Anson Chen, MD

I loved doing my residency here at UVA. Everyone was so supportive, including both faculty and co-residents. Everyone is happy to help each other out in times of need, including call, or someone stepping up if one of us had emergencies. My co-residents also made memorization PowerPoints and shared them with the rest of the class during board studying. It has just been a warm and friendly place to learn and grow.

Plans for Next Year: I will be completing my breast fellowship here at UVA.

### Nick Dueck, MD

I feel very grateful for the opportunity I have had to train at UVA, where we see such a great variety of cases, work with professional and collegial faculty, and enjoy such a supportive atmosphere among the residents. If I had to choose residency over again I would definitely choose UVA. I have never felt such support and mentorship during any level of my training as I have here.

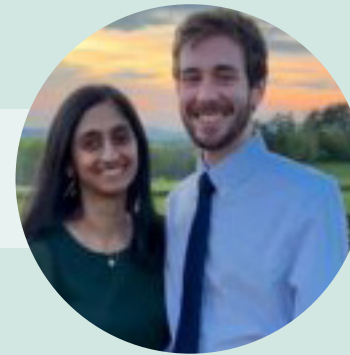

Plans for Next Year: Next year I am very much looking forward to completing a neuroradiology fellowship here at UVA. Following that I will be moving to the one of the largest metropolitan areas in the country – good ol' Boise, Idaho –for a job with Gem State Radiology.

### David Dwyer, MD

UVA and Charlottesville have been a big part my life, as I've been here for undergrad, residency, and next year, fellowship! I have learned and grown a lot and wanted to thank the teachers, mentors, and friends who have helped me along the way.

Plans for Next Year: I'll be completing an interventional radiology fellowship here at UVA.

### Sukhi Grewal, MD

UVA has taught me many important skills that I know will stay with me throughout my career. I feel grateful to have connected with incredible mentors and for my many friendships made at UVA. I am similarly thankful for everything I've learned from our nurses, students, techs and patients. The many opportunities here make working at UVA a privilege.

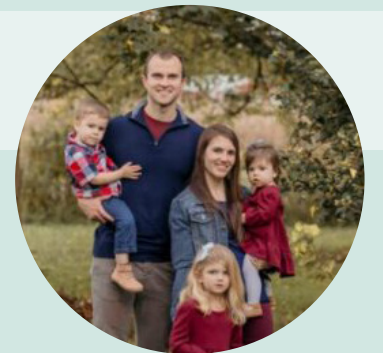

Plans for Next Year: Next year I will be continuing interventional radiology training here at UVA.

### Nicole Kapral, MD

My husband and I have loved Charlottesville and UVA since we first moved here for my medical school and his law/MBA program.

I think we had great training and exposure to a wide variety of cases and pathology. The faculty have not only been amazing teachers, but several of them have become close friends and mentors over the years. As many can attest, I had an especially difficult time settling on a subspecialty and had extended conversations with numerous attendings who all gave me helpful academic and personal advice. I've also had the pleasure of spending so many years with my co-residents, some of whom have become close friends. Several of us have had multiple children during residency and they have been able to grow up together. A shout out to Nick Dueck and his family who have recently gotten into pickleball with us and try to play weekly when call schedules allow.

Plans for Next Year: I will be completing an MSK fellowship here at UVA.

### Dhara Kinariwala, MD

I am fortunate to have developed many lasting relationships during my time at UVA and have found wonderful mentors. My training at UVA has been excellent and I'm very grateful for the experience. Best of luck to the incoming class – you can do it!

Plans for Next Year: I will be pursuing an interventional radiology fellowship here at UVA, followed by a pediatric IR fellowship at Children's Hospital of Philadelphia in 2 years.

# REFLECTIONS

CONTINUED

## Andrew Renaldo, MD

In my time at UVA, I've learned many critical interpretative skills that I hope will remain with me during my career in radiology. But what I will remember most fondly are things less directly applicable to my future job: the coffee runs with friends, the tangents during sign outs, and the communal acknowledgement that "getting some steps in" is commendable. In a field where looking ahead—at the ever-replenishing worklists, and endless information to learn—is daunting, these things were an injection of joy that kept me in the moment. These things made coming to work each day a privilege, and are a reflection of the familial environment that led me to UVA.

Plans for Next Year: I am staying at UVA for a breast imaging fellowship.

## Matthew Schmidt, MD

I've gotten excellent training at UVA and am thankful for the great attendings and co-residents I've worked with.

Plans for Next Year: I'm going to stay here for MSK fellowship next year.

## Rishabh Singh, MD

I will remember and appreciate UVA Radiology as a place I was proud to train at because I received truly world-class training by world-class radiologists. I had excellent role models who were both superb people and superb radiologists. Consequently, I grew as a person, a professional and as a radiologist. It has been one of my life's biggest honors and pleasures to train at UVA. I will always carry this place and these people in my heart.

Plans for Next Year: I will be doing a breast imaging fellowship and will officially be an Instructor in Clinical Radiology and Radiological Sciences at the Vanderbilt University School of Medicine.
